

4. Operation of e-assessment systems

E-assessment systems must be stable and work reliably to generate valid and reliable assessments and/ or results. They must be demonstrably consistent with relevant recognised standards of good practice and be easy to navigate.

4.1 Awarding bodies must ensure that e-assessment systems are sufficiently robust to support high-stakes assessment.

4.2. Awarding bodies must have procedures in place designed to ensure that any services provided by network suppliers meet the regulatory authorities' principles for security and data integrity as well as relevant industry standards and best practice (see Appendix 1 for a list of relevant industry standards and best practice).

4.3. E-assessment systems must include functionality to generate key information, for example statistics on results and system error reports and data that will demonstrate regulatory compliance.
